任務一

連接EE635的wifi, 使用ifconfig指令列出自己的ip, 找到192.168.50.XX開頭的ip 記住你的ip

ifconfig指令不能用解法:

sudo apt update
sudo apt install net-tools
ifconfig

https://phoenixnap.com/kb/ifconfig-command-not-found

任務二

現在, 嘗試使用ssh指令連接到同組組員的電腦 組長連到組員, 再退出, 再由組員連到組長

ssh安裝與教學

sudo apt install openssh-server
https://magiclen.org/linux-ssh/

```

```

任務三

現在是組員連到組長電腦,雙方都在terminal打byobu開啟byobu界面,這時你會發現雙方的動作是同步的,一起熟悉byobu指令

byobu教學

sudo apt-get install byobu

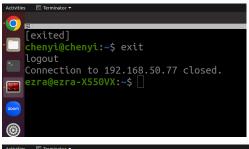

https://blog.csdn.net/gg 42948513/article/details/105500097

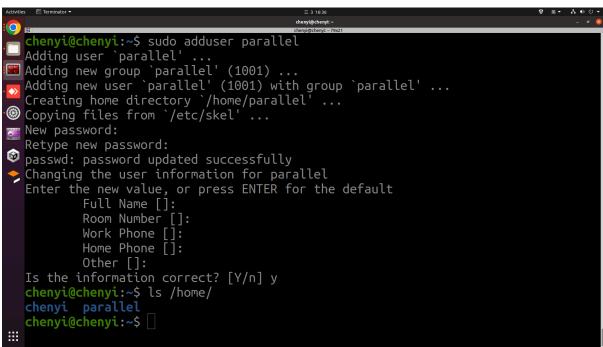

```

| Support: | Composition | Com
```

現在組長組員都使用exit退出byobu, 組員多一次exit離開組長電腦, 組長使用sudo adduser新增一個電腦使用者, 使用者名稱為parallel, 密碼可以自訂

https://samwhelp.github.io/book-ubuntu-basic-skill/book/content/account/adduser.html

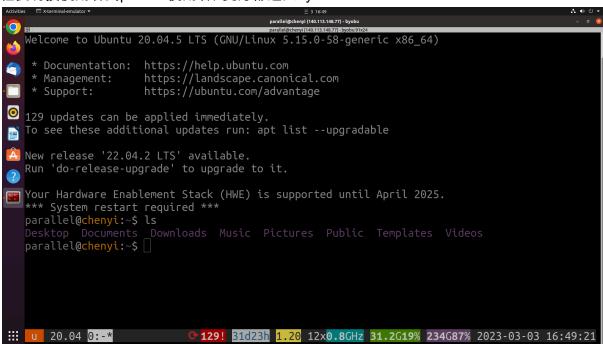

任務五

組員再一次ssh連到組長第腦,但是這次連到parallel這個使用者

任務六

組長切換使用者到parallel使用者,雙方都進入byobu

找助教demo

任務七

合作寫出一個turtle.py, 能夠讓使用者透過指令控制烏龜位置, 發揮parallel coding精神, 一個人寫, 一個人看, 多討論, 合作完成

```
Parallel@chenyt:~$ python3 turtle.py
turtle pose: [1, 1]
Enter command (up, down, left, right): up
New turtle pose: [2, 2]
Enter command (up, down, left, right): down
New turtle pose: [2, 1]
Enter command (up, down, left, right): left
New turtle pose: [1, 1]
Enter command (up, down, left, right): down
New turtle pose: [1, 1]
Enter command (up, down, left, right): left
New turtle pose: [1, 1]
Enter command (up, down, left, right): hello
Invalid command, please try again
Enter command (up, down, left, right): down
New turtle pose: [1, 0]
Enter command (up, down, left, right): down
New turtle pose: [1, -1]
Enter command (up, down, left, right): left
New turtle pose: [0, -1]
Enter command (up, down, left, right): up
New turtle pose: [0, -1]
Enter command (up, down, left, right): up
New turtle pose: [0, 0]
Enter command (up, down, left, right): up
New turtle pose: [0, 0]
Enter command (up, down, left, right): up
New turtle pose: [0, 0]
Enter command (up, down, left, right): up
New turtle pose: [0, 0]
Enter command (up, down, left, right): up
```
